

COMMUNICATIONS PACKAGE

Power to Prevent Cancer Summer 2018

Thank you for heeding the call to make this summer the hottest HPV vaccination season of all time.

The HPV Vaccination Roundtable's *Power to Prevent Cancer!* communications package will help you encourage the healthcare providers in your membership/audience to flex their super powers and prevent HPV cancers.

This package has 8 weeks of content to keep the message consistent all summer long, but you don't have to use it that way. You are welcome to use all the copy in any frequency you want. **It's up to you!** The only requirement is that you stop using the content by the end of August, or the start of school in your area. You are also encouraged to add your logo to the social images or the poster.

Each week of the campaign, we suggest you roll out an image with a "super tip" message plus links to articles that reinforce the super tip with data. This will appeal to the heads and hearts of healthcare providers and give them a boost.

HEADLINES BY WEEK:

Week 1 – July 8 – Be Part of the HPV Super Six Hero Team! Launch Week

Week 2 – July 15 – Office Staff

Week 3 – July 22 – Small Practices

Week 4 – July 29 – Dental Health Care Providers

Week 5 – August 5 – Physicians, Physician Assistants, and Nurse Practitioners

Week 6 – August 12 – Nurses & Medical Assistants

Week 7 – August 19 – NIAM: Preteen Vaccine Week

Week 8 – August 26 – Keep the Power All Year Long – *Includes Tips for Large Systems*

We've also included a package of materials for parent audiences starting on page **13.**

In the package, you will find:

AUDIENCE BRIEF

GOAL

Activate National HPV Vaccination Roundtable member organizations, as well as state HPV roundtables and coalitions, to use their networks to increase awareness of the HPV vaccination series during the 2018 “vaccination season,” the period of summer when school-age children are receiving vaccines, some of which are required to start school in the fall.

TARGET AUDIENCES

- Nurses & Medical Assistants who treat 11-13-year-old patients and parents of adolescents
- Physicians, Physician Assistants, and Nurse Practitioners who treat 11-13-year-old patients and parents of adolescents
- Dental Health Care Providers who see 11-13-year-old patients and parents of adolescents
- Office Staff who see 11-13-year-old patients and parents of adolescents in their clinic
- Large Health Systems who serve 11-13-year-old patients and parents of adolescents
- Small Practices who serve 11-13-year-old patients and parents of adolescents

OBJECTIVES

- Motivate providers, systems, and networks to promote HPV vaccination during back to school vaccination season – July – August 2018
 - Create assets to encourage HPV Roundtable members and their partners to disseminate messages to their audiences
- Contribute to the increase of summer HPV vaccinations to decrease HPV cancers

IMPLEMENTATION TIMEFRAME

Campaign material will be sent out: Late June 2018

Campaign will launch: July 8 – August 31, 2018

HEADLINE: You Have the Power to Prevent Cancer

BODY COPY:

The power to prevent cancer is in your hands!

Prevent 6 Cancers

You have the power to prevent human papillomavirus (HPV) cancers and pre-cancers among patients in your care. HPV cancer prevention starts with you.

The HPV vaccine prevents infection with certain types of HPV that can cause cervical, throat, vulvar, vaginal, penile and anal cancer.

Be Part of the HPV Super Six Hero Team!

Do you see or treat 11-13-year-old youth as part of your practice, clinic or health system? If so, you could join a powerful team of six superheroes – all of whom have the power to prevent cancer with the HPV vaccine. You have the power and now you have the tools. These six action guides will help you and the rest of the Super SIX prevent up to six cancers caused by HPV infection!

VISIT The National HPV Roundtable's *Power to Prevent Cancer!* Page at <http://hpvroundtable.org/power/> to get specific tips Physicians, Physician Assistants, and Nurse Practitioners.

EMAILS TO PARTNERS, COLLEAGUES, ETC

Hello [NAME],

You might already know that summer is the hottest time to increase HPV vaccination rates. Back-to-school appointments peak in August and HPV vaccination rate increase 5-fold. However, we can raise those rates even higher ensuring all age-eligible boys and girls are put on the path to long-lasting cancer protection.

We're participating in the National HPV Vaccination Roundtable's *You've Got the Power to Prevent Cancer!* communications event. This event is intended to encourage medical providers to flex their super powers and help prevent 6 HPV cancers.

This campaign has specific information for 6 types of healthcare providers/systems to pump up the power of HPV cancer prevention. We have content specifically for those who see 11-13-year-old patients and parents of adolescents including:

- Nurses & Medical Assistants
- Physicians, Physician Assistants, and Nurse Practitioners
- Office Staff
- Large Health Systems
- Small Practices
- Dental Health Care Providers

The power to prevent cancer is in your hands! Be part of the HPV Super Six Hero Team to work to eliminate human papillomavirus (HPV) cancers. Learn how the HPV Super Six Hero Team are on a mission to end to HPV cancers >> <http://hpvroundtable.org/power/> (or your own link)

Also follow along on Facebook and Twitter for the next 8 weeks as we share all the tips to increase HPV vaccination in medical practices.

If you have any questions about this communications event or want to add materials to your website or social media, contact [NAME].

Thank you,
[NAME]

FOR PARENTS

WEBPAGE OR BLOG POST COPY HEALTHCARE PROFESSIONALS CAN USE FOR PARENTS

HEADLINE: Supercharge Your Kid's Cancer Fighting Power

Are you the parent of an 11- or 12-year-old? It's #Time2Vax! Make sure your child gets the three vaccines that protect against infections that cause whooping cough, HPV cancers and meningitis.

We can reduce the risk of our children getting certain cancers later in life by helping them make healthy choices now, including eating a healthy diet, staying away from tobacco, and being physically active. We can also help prevent most HPV cancers with just 2 shots of the HPV vaccine.

Decades of research have proven the HPV vaccines to be safe, effective, and provide lasting protection.

By starting HPV vaccination at age 11 or 12, you offer the most HPV cancer prevention for your child. Children are vaccinated before they're exposed to an infection – just like measles or pneumonia. HPV is so common that most people will be exposed at some point in their lives.

The HPV vaccine is given as a series of two shots and doctors recommend that girls and boys get vaccinated against HPV at age 11 or 12. The series should be complete by age 13.

Summer's winding down, but cancer prevention is revving up! Make sure to ask for the HPV vaccine at your next appointment.
