

**IMPROVING CLINICAL SYSTEMS TO INCREASE HPV  
VACCINE UPTAKE**

Mission:  
**HPV** **CANCER**  
**FREE**

**Marcie Fisher-Borne, PhD, MPH, MSW**  
Senior Director of HPV Vaccination

Let's work  
on HPV

How can we  
make an  
impact?

What  
should we  
do?

# Patient Reminder/Recall

- Texts
  - Email
  - Phone
  - Mail
- 
- Impact: Small to Medium
  - Cost: Can be high

# Provider Reminders/Prompts

---

EHRs

Morning Huddles

- Impact: Small to Medium
- Consideration: Adding language for recommendation may increase success

# Assessment and Feedback

Bottom Line:

Knowing Data will Improve Progress

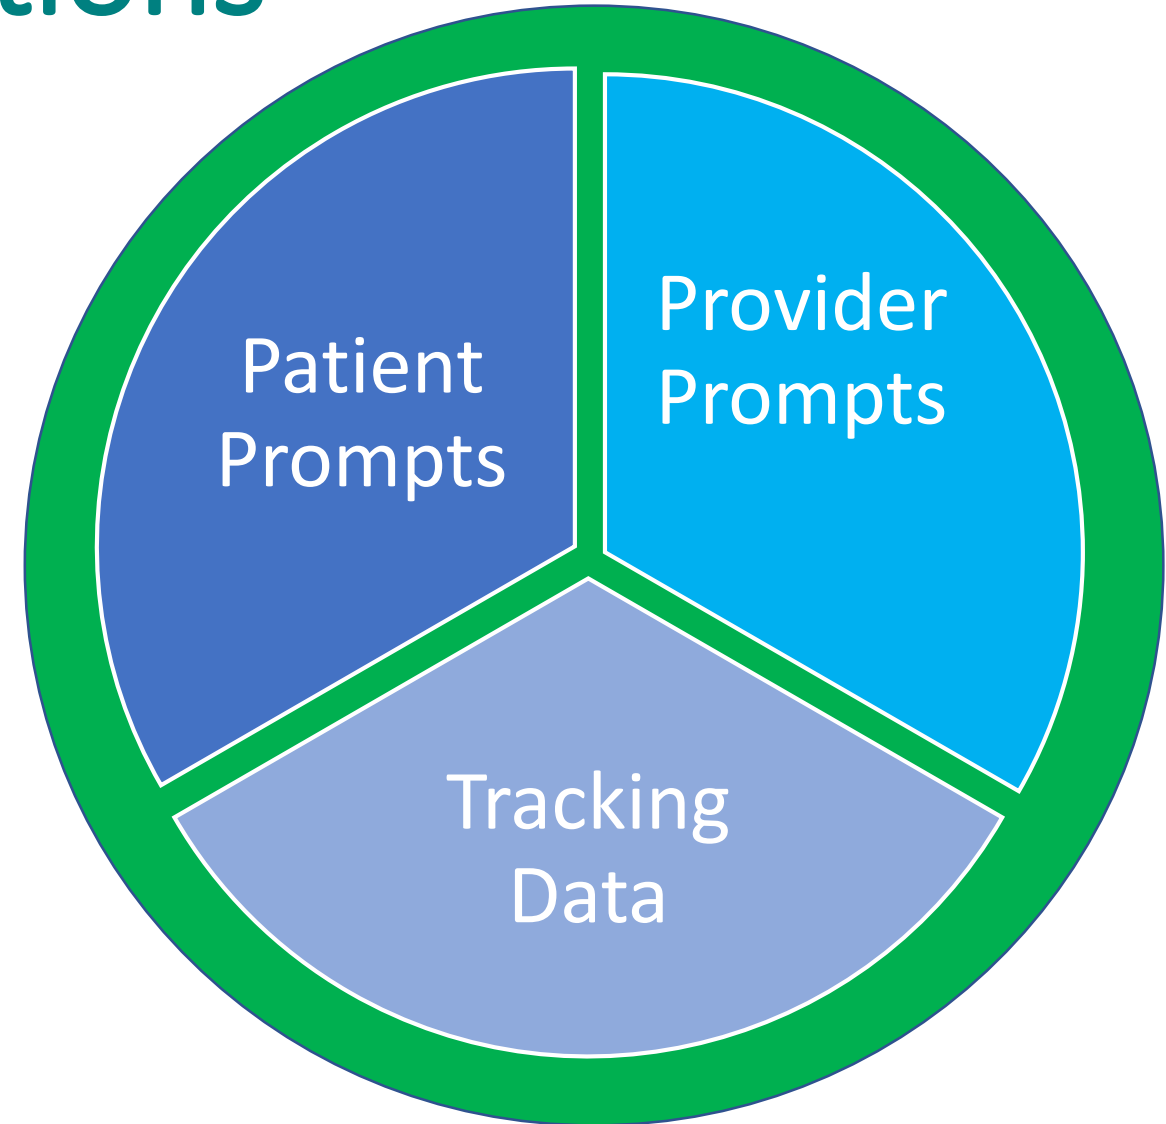

- Impact: Small/Higher with younger populations

Projected HPV vaccination rate

# Multi-Level Interventions

May be most impactful.

Clinical Champions  
Matter.

So engage them in  
the system where  
they work.

Providers work in **systems** so interventions should address both.

# Big Questions

- ❖ How can interventions tested at the clinic level be successfully disseminated in larger health systems? **Scale.**
- ❖ Multi-level interventions in rural settings, How? **Capacity.**
- ❖ How do we utilize existing programs/mechanisms?, like the CDC's Immunization Quality Improvement for Providers (IQIP, formerly known as AFIX) and ACS's health systems staff to support efforts?  
**Awareness of/Partnership with Existing Structures.**
